1. Executive Summary

In modern organizations, managing Google Workspace file sharing and ownership across different teams gets complicated fast. Default Google settings often leave Top Leaders out of the loop and trap important company documents under individual staff accounts. Plus, relying on staff to share files manually causes delays, missing links, and security risks.

Quick Reference for Terminology Used in This Document:

- **Individual:** A person who is not a leader within BCW. This includes volunteers, staff, instructors, and other team members.
- **Top Leader:** A person who holds a leadership role within BCW and is responsible for managing a team, department, administration, or the overall organization.
- **People:** Refers collectively to both individuals and Top Leaders.
- **Google Workspace & Google Drive:** Google Workspace refers to your entire organizational Google ecosystem (including Gmail, Google Calendar, Google Drive, etc.). Google Drive specifically refers to the cloud storage system hosting your documents, sheets, and files. Knohow connects to Google Workspace and manages file permissions and search across your Google Drive environment.
- **Owner (in relation to files):** The owner of a document in Google Drive has total control, including rights to edit, move, rename, or delete the file. While Google automatically makes the creator the owner, Knohow re-assigns or shares ownership rights with Top Leaders to safeguard organizational assets.

What is Knohow?

Knohow is a central governance tool that connects directly to BCW's Google Workspace. It unifies scattered files across multiple drives, automates proper access permissions, and enables deep, cross-account search capabilities across your entire organization.

2. What Problems Does Knohow Solve?

Managing BCW's Google Workspace currently presents key operational challenges regarding organization, access, visibility, search, and security:

1. Organization

- **Scattered Files Across Multiple Drives**
 - **The Problem:** Documents end up spread across many different Google Drives, personal folders, and individual accounts.

- **Why It's Bad:** It makes company files extremely difficult to organize and track, leaving people unsure of where to find the correct, up-to-date information.

2. Access & Sharing

- **Top Leaders Are Not Made Owners of New Documents**
 - **The Problem:** When individuals create files, Top Leaders are not automatically added as file owners.
 - **Why It's Bad:** If a Top Leader needs to edit or move a document, they have to stop and ask the creator for permission. This creates major issues when an individual leaves BCW, as their documents remain locked under their account.
- **People Simply Forget to Share Their Files**
 - **The Problem:** Individuals have to manually figure out and remember who needs access to every document they create.
 - **Why It's Bad:** It is easy to forget to share files with other individuals on a team or with Top Leaders. This leads to wasted time as people search for missing files or exchange back-and-forth emails just to request access.

3. Oversight & Visibility

- **Lack of Central Oversight for Top Leaders**
 - **The Problem:** Top Leaders cannot see the organization's files or daily progress in real time because there is no central dashboard to view all work.
 - **Why It's Bad:** Top Leaders stay disconnected from ongoing projects unless someone manually sends them a link or access request, making it hard to maintain quality and direction across teams.

4. Search Limitations

- **Restricted Search Across Google Drive**
 - **The Problem:** Google Drive limits searches to one drive at a time and cannot search inside documents that haven't been shared with you, nor does it support deep filters across team accounts.
 - **Why It's Bad:** Important files are easily lost or misplaced, forcing people to waste time asking around or recreating work that already exists.

5. Offboarding & Security Risks

- **Unsecured File Access After Individuals Leave**
 - **The Problem:** When an individual leaves the organization, their account often

remains the owner of key documents, or their account retains viewing permissions.

- **Why It's Bad:** Individuals who have left may still have access to confidential documents, creating major data security risks and leaving organizational assets tied to personal accounts.

3. How does Knohow Solve These Problems?

1. Organization

- **Unified Workspace**

- **The Solution:** Unify scattered files across all company accounts into a single, structured hub.
- **How It Works:** Knohow connects your organization's different Google Drives into one consolidated workspace while organizing files according to your predefined organization structure.
- **Why It's Good:** Eliminates file clutter, ensures all Google Drive documents live in one predictable location, and prevents files from getting lost in personal drives.

2. Access & Sharing

- **Automated File Ownership (Auto-Own)**

- **The Solution:** Ensure Top Leaders automatically maintain full ownership of all newly created organization files.
- **How It Works:** Knohow automatically assigns file ownership rights to Top Leaders and designated team leaders as soon as any organization-related document is created.
- **Why It's Good:** Top Leaders can edit or move documents instantly without asking for permission, and critical files never stay trapped under an individual's account.

- **Automated File Sharing (Auto-Share)**

- **The Solution:** Remove the burden of manual file sharing from individuals.
- **How It Works:** Documents are automatically set to share with Top Leaders and designated team members by default. When an individual creates a new file, Knohow provides a quick confirmation prompt (e.g., "Share with Marketing Team?"). Unless the individual explicitly chooses to opt out, access is routed instantly in the background without manual setup.
- **Why It's Good:** Prevents human error, saves time spent asking for document

links, and guarantees people have immediate access to the files they need.

3. Oversight & Visibility

- **Real-Time Organization Dashboard (OverSight)**
 - **The Solution:** Provide leaders with full, central visibility over all work and activity.
 - **How It Works:** Top Leaders access a central dashboard displaying real-time updates, activity logs, file ownership details, and live document activity across departments.
 - **Why It's Good:** Keeps Top Leaders fully informed without requiring individuals to send manual updates, links, or status emails.

4. Search Capabilities

- **Cross-Account & Advanced Search (DeepSearch)**
 - **The Solution:** Enable powerful, organization-wide document search.
 - **How It Works:** Top Leaders can search across multiple Google Drives simultaneously using deep filters, keyword searches, and document-type selections.
 - **Why It's Good:** Saves valuable work hours by allowing individuals and managers to instantly locate any document, even if it wasn't manually shared with them directly.

5. Offboarding & Security

- **One-Click Security Offboarding**
 - **The Solution:** Instantly secure organization files when an individual or contributor departs.
 - **How It Works:** Top Leaders use a single click to revoke access rights and transfer full document control away from departing individuals.
 - **Why It's Good:** Protects confidential company information, eliminates data leak security risks, and keeps all created assets safely inside the organization.

4. Product Overview & Workflow

Core Features

- **Unified Workspace:** Connects all separate Google Drives into one central hub.
- **Auto-Own:** Automatically assigns document ownership to Top Leaders the moment a

file is created.

- **Auto-Share:** Automatically routes file access to relevant individuals and Top Leaders by default.
- **OverSight (Live Dashboard):** Gives Top Leaders a real-time view of all team files, active edits, and document history.
- **DeepSearch:** Allows leaders to search across all organization Google accounts at once using keywords and filters.
- **Org-Chart & Permissions:** Allows you to map out your teams and departments and sets clear security rules for who can see what.
- **Instant Offboard:** Revokes document access and secures file ownership in a single click when someone leaves.

How Knohow Fits Into Your Daily Work:

Step 1: Initial Setup (Mapping Your Org Chart)

Setting up Knohow is quick and straightforward for Top Leaders:

- **Build Your Teams:** The Top Leader outlines the organization structure by assigning people to their respective teams. For example, they might set up a Marketing Team with 1 Team Leader and 3 individuals.
- **Set Clear Rules:** The Top Leader decides who gets to see what. For example, they can set a rule so the Marketing Team cannot view confidential Finance Team files, while Top Leaders retain automatic access to everything.

Step 2: The Individual Day-to-Day Experience

Individuals do not need to learn a complicated new system. They simply log into a clean portal to open Google Docs, Sheets, Slides, etc.

- **Scenario A (Standard Team File):** An individual creates a new report on Google Docs. Knohow defaults to sharing it with their team and Top Leaders, showing a simple prompt (e.g., "Share with Marketing Team?"). The individual clicks Confirm (or does nothing), and permissions are routed automatically.
- **Scenario B (Private Working Draft):** An individual creates a draft on Google Docs that they aren't ready to show the team. They select Personal. The document stays hidden from team members, but Top Leaders retain background ownership so company assets are never lost.

Step 3: The Leadership Experience

Top Leaders no longer need to request links or search through email threads.

- **Real-Time Control:** Leaders log into the OverSight Dashboard to view all active organization documents, monitor changes, and manage file access across every department.
- **Instant Offboarding:** When an individual leaves BCW, a Top Leader clicks Offboard. Knohow instantly revokes the individual's access and keeps all document ownership safely within the organization.

5. Privacy & Security Framework

Keeping BCW's data safe, private, and under top leadership's control is the foundation of Knohow. Built with strict security controls, Knohow ensures your organization's confidential information is fully protected.

Security Category	The Safety Standard	What It Means for You
Data Isolation & Access Control	Knohow connects securely to Google Workspace using standard authentication (OAuth 2.0).	Your document contents stay safely stored inside your existing Google Drive. Knohow only manages file permissions and organization; it never stores, sells, or harvests the text inside your documents.
Encryption Standards	High-level encryption protects all data moving between Knohow and Google Workspace (TLS 1.3), as well as saved settings like your org chart (AES-256).	Your data is protected by the same security standards used by banks and modern cloud platforms, keeping unauthorized eyes out.
Role-Based Security	Access is strictly limited based on assigned roles set by Top Leaders.	Individuals and team leaders can only access files within their assigned teams or departments. For example, a Marketing team member cannot view confidential Finance documents unless explicitly granted permission.
Audit Logging	Every action taken in the system is recorded in a secure, tamper-proof activity log.	Top Leaders have full oversight and accountability. You can see who created a file, who gained access, and when permission changes occurred at any time.

6. Pricing & Timeline

Knowhow pricing includes setup assistance and ongoing support.

Pricing Options

- **14-Day Free Pilot (Included):** Try out the platform fully configured for your organization.
- **1-Year License:** \$1,800 per year or
- **3-Year License:** \$3,000 total (saves \$2,400 over 3 years)

What Is Included

- **Complete Setup Support:** Full assistance setting up your organization structure and permissions.
- **Full Access:** Unlimited document routing, automated ownership, and live dashboard oversight.
- **Ongoing Support:** Continuous platform updates, security maintenance, and technical assistance.

Timeline & Guarantee

- **Proposal Delivered:** September 8, 2026
- **Decision Deadline:** September 14, 2026 (1 week to review or contact us for clarification)
- **Setup & Integration Begins:** September 15, 2026
- **30 Day Guarantee (Refund):** After the 14-day free trial, you'll have a 30 day grace period to request a pro-rated refund if Knowhow isn't the right fit. After this period, payment is non-refundable.
- **Updates & Changes:** Once delivered, we will continuously update and monitor Knowhow for safety and performance. Any additional feature requests or changes fall outside this proposal and will require a separate consultation.

7. Next Steps & Acceptance

To proceed with the deployment of Knowhow for BCW, please review and confirm this proposal. Upon approval, we will schedule the initial onboarding session to map your organizational structure and initiate integration.
